

Enable Github integration in Clion

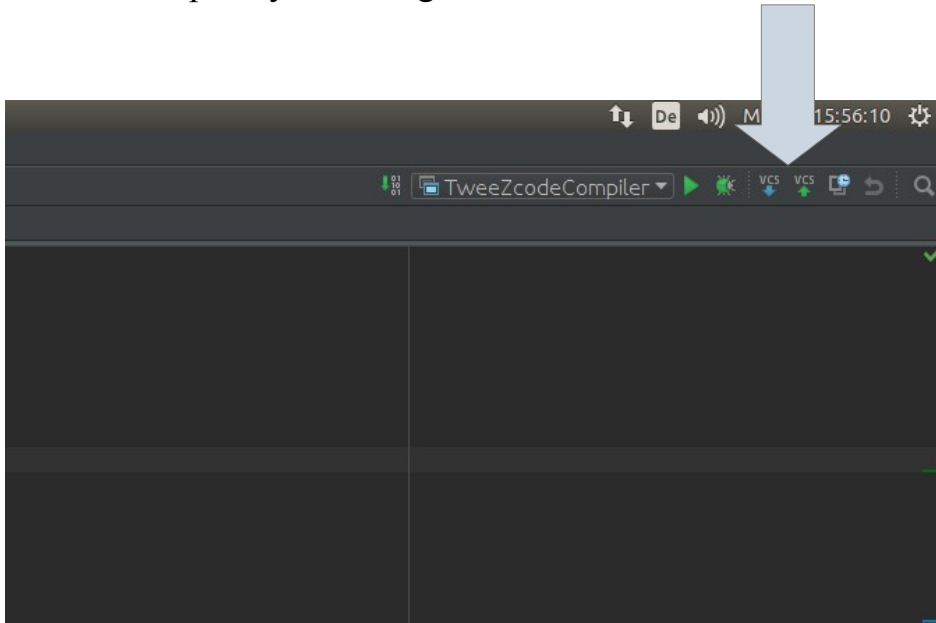

- Open Version Control in Settings (File → Settings → Version Control → Github):

- Enter user name and password. Click Test button to check if Clion is able to connect to your github account.
- Now there is a menu in the bottom left corner for git. Click on (1) to see all remote and your local branches. Select a remote one to create a new local branch (2) from. This way you can also merge the selected branch into your current open branch (3):

- Commit and push your changes via buttons in the tool menu:

- More git commands (e.g. fetch, rebase) can be found in the menu:
VCS → git
- pull requests need to be created at the github website
- you can always checkout (= switch to) other local branches (to checkout remote branches first click on a remote branch → checkout as new local branch) and delete LOCAL branches (do not remove remote ones!) via:
